

How fast do Airboats travel?

Airboats can reach a speed of over 120 M.P.H. Dryground capabilities work in a range of 7:1 Power to weight ratio or less. For example; If your boat weighs 2100 lbs and is running 300 hp (provided you have good polymer on the bottom) you will probably be able to run on dry ground. Different terrain causes different friction which is the prime limiting external factor.

Who built the first airboat?

The first Airboat was built in Canada by Dr. Alexander Graham Bell with the help of his engineers he built an airboat, Dr. Bell named it the Ugly Duckling. The prototype airboat was used to test various Engines and props in the Province of Nova Scotia. Beinn Breagh was the town and 1905 was the year. Dr. Bell also invented the first telephone.

Where can an airboat be used?

Everywhere.

What is the definition of “Airboat”?

“Airboat” - A self propelled vehicle that depends solely upon air thrust without air cushion to move in any direction across land, vegetation, water, ice and combinations of conditions associated with buoyancy. Typically greater than 12 feet long, having two or more fan blades, less blades are quieter.

AIRBOAT

(Patent Pending)

Made in **Italy**

5 years warranty no excuses guarantee

<i>Can an airboat run on dry ground?</i>	Yes briefly
<i>Can an airboat run on 3-4 feet waves?</i>	Yes
<i>Does mud stop airboats and can they get stuck?</i>	No
<i>Will an airboat ride through and over log jams?</i>	Yes
<i>Can an airboat run in extremely hot or cold weather?</i>	Yes
<i>Can an airboat climb up on it's trailer on dry ground?</i>	Yes
<i>Is an airboat capable of climbing a bank at 45° out of water?</i>	Yes
<i>Can a person run an airboat up river rapids and over rocks?</i>	Yes
<i>Can airboats carry 10 passengers?</i>	Yes and more

Of course not all airboats can operate in all conditions, answers depend upon the airboat and the local environment. HTI Airboat are buoyant and unsinkable, they can be equipped with a closed cell foam, fire resistant hull upon request.

Quality System Certified
 ISO 9001:2000
 Cert. Nr: 50 100 4509

HTI Rescue Airboats utilise an aircraft engine with a power output of 150 to 1300 HP.

The **ABR** is the apex of the achievement of **HTI** in the study, design and development of highly mobile craft, work that began in 1995 with the water safety range. Airboat made by **HTI** are named **ABR** and are available in **many sizes and configurations**, they incorporate the best technology available on the market today and the most advanced technological options including, side-by-side seating, fly by wire an enclosed air conditioned cabin. It has **side stabilizers to prevent capsize even when turning sharply and they turn 360 degrees on the spot**. More space for the pilot, greater engine power and a lighter, highly resilient hull.

A great deal of work has also gone into making the design even more graceful, quieter and reduced air pollution to euro level 4.

The **HTI** lightweight rescue, patrol and pleasure airboat is the first and most reliable choice for you needs.
